## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1 and 3-8 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest an effective path selector for outputting only symbol data with a sign corresponding to the majority sign among the symbol data received from the energy determiner, wherein only symbol data with an energy higher than a threshold is being applied to the effective path selector; and a channel combiner for accumulating the symbol data received from the effective path selector and outputting the accumulated symbol data, as specified in the independent claims 1, 4, 6, and 7.

The prior art does not teach or fairly suggest outputting symbol data with energy higher than the threshold to an effective path selector and setting symbol data with energy less than the threshold to 0s by the energy determiner; checking the signals of the symbol data received from the energy determiner by the effective path selector; and setting symbol data with a sign different from the majority sign to 0s and outputting symbol data with majority sign to a channel combiner by the effective path selector, as specified in the independent claim 8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fukumasa et al (US Patent No. 6,058,138) discloses radio reception system providing improved transmission quality.

Zhou et al (US Patent No. 6,426,949 B1) discloses signal reception apparatus for DS-CDMA communication system.
